

## Sound-absorbing Weather-proof louvre

Weather-proof louvre, sound-absorbing made of aluminium.

Frame made of 3mm thick aluminium profiles, cut into miter and welded.  
Flange width 35mm.  
Frame depth 310mm.

Double-walled blades made of aluminium, filled with mineral wool.

Blades positioned with spacers within the frame, with vertical tension anchors through the blades and spacers and with a torsion-resistant connection to both horizontal top and bottom frame profiles.

Wire mesh, galvanised (mesh size 16/16 mm) to prevent birds and other small animals from entering into the system, attached to the back of the frame and blades.

### Options (please select only the appropriate for tenders):

- powder-coated, colour of your choice
- drip nose on lowest blade
- welded lashes on the back for concealed installation
- with insect screen
- Versions in stainless steel (V2A 1.4301 / 1.4307; V4A 1.4571) or copper
